Indor**Tec**[®] THERM-C

Low-voltage wall heating

As an invisible towel warmer and wherever additional heat is needed

IndorTec[®] THERM-C is an extremely thin-film low-voltage wall heating system that can be used multifunctionally under tiles and plaster systems. Thanks to the factory-fitted supply cable, quick installation and easy connection are possible without additional electrical installation. Especially in renovation projects, the wall heating system can be retrofitted at any time without great effort.

Easy retrofitting thanks to low installation height

Easy connection without additional electrical installation

Universally applicable wherever additional heat is needed – even in the shower

Fast response time, evenly warm, low operating costs

Can be cut to size
